

## CHAIRMANS ADDRESS

With the cold and wet weather in the southern states, it is the usual battle to get applications done. We urge members not to be pressured by those who "want it done" even though there may be a wet substrate!!! As we all know where that will end up.

The AIW is seeing more and more waterproofers and affiliated professionals join the up so the word is out that we are finally getting somewhere.

I take this opportunity to say Thanks to the current Committee who are all giving up their own time and effort to push forward with the ongoing battle to better our industry.

Mal Ferraro and Frank Moebus have been doing the QBCC roadshow which I am sure they will post all about this in this newsletter. Well done guys.

We are seeing some shift in local (Vic) government mentality towards the age old problem of water ingress and the subsequent damages it's causing.

The AIW has recently submitted an amendment request to the VBA for a re-wording of the Building Code in reference to waterproofing applications being inspected by building surveyors. We hope they will agree with this amendment

which would then require builders to have a membrane system inspected and signed off before a Certificate of Occupancy is issued.

And we are still pushing for the Tiling Standard to be re-instated (Standards Australia wants to abolish it so we will have no standard for correct tile laying!!) – It's on hold at the moment. For all those who are applying correctly, this will be a favourable change and for those that are not (not AIW Members) will help them bring up the standard and install a decent membrane system that can be warranted with piece of mind. The Building Surveyors will need training on what to inspect as currently what we see is they just ask for a certificate of compliance and they are happy with this. Stay tuned for further outcomes on this hot topic.

In June, I travelled the country (on my own coin- so don't worry about your AIW sub's) side visiting a number of waterproofing industry professionals who are also passionate about the industry. One in particular, from the UK, is Mr Ian MacLennan (or Mac) who is at the forefront of underground waterproofing. He and his team in the UK have a broad knowledge and undertake some very large projects with terrific results. We spoke for many hours in his offices and we explored the methods and criteria they use in the UK where they have a "Below Ground Standard" unlike us where we do not even have a standard for this. !!!! More on that later.

While we are still twiddling our thumbs in Australia getting a standard, we at the AIW are looking at adopting the British standard for our use here. This may help eliminate all the guess work involved with contractors doing what they feel is right but not always ending up right. The high amount of below ground leaks is becoming a very serious problem as we all want more bang for our buck when building a home or development and going down as the answer for more M2 in a build.

As I pursue more on this underground

topic, I will keep you all in the loop. I encourage everyone to get on the AIW website - update your company details and get involved in the newly created Forum on the website - this will be a great place for members to have a say about what they see should be happening and help each other out if you have a tricky job and not sure how to tackle it.

Remember, we may be competitors but we are also a small fraternity with a large amount of work out there. We need to work together more rather than being out there on your own. You are not- you're a member of a wider network being with the AIW.

**Paul Evans**  
AIW Chairman

## Member Submissions

**Want to be featured in the AIW Newsletter?**

We welcome your submissions whether it is a completed project or information regarding an upcoming training course. If you would like to contribute your content please email [info@waterproof.org.au](mailto:info@waterproof.org.au)

*\*\* Please Note submissions are to be impartial and not used to advertise your products or services \*\**

## Welcome to The Australian Institute of Waterproofing official representative body website

To represent the interests of the total industry in raising the standard of waterproofing in Australia by becoming the 'central source' of knowledge, augmented by members experience to mentor continuous change.

## OUR NEW WEBSITE IS LIVE

The AIW is excited to have launched our brand new website for 2017.

View the latest industry news and events, read technical and training information, engage in the forum or add your business details to the new directory to promote yourself to the public. Please make sure you re-add

your company info to the directory ASAP. This will ensure you come up on our website when people search for waterproofer's in your area.

Simply visit the link below and fill in your details:

<http://bit.ly/2wfERqI>

The process requires your input, so please do not delay in entering your details. We will receive a notification of your submission which will be activated via 'administration approval'. Please allow a couple of days to become active. Should you have any trouble please contact me or call Elliot from Temerity Digital on 0413 334 699.

## Waterproofing Changes in Victoria

The Building Act 1993 remain, however current the Building Regulation 2006 are to be 'sunset, replaced by the proposed Building Regulations 2017 (legislated around September)

Changes in the 2017 Regulations which affect the waterproofing industry relate to "Part 13 – Inspections notices and Orders; Division 1 – Inspections and Directions; 169

Prescribed mandatory notification stages for construction or alteration of building". For the first time a building inspector or surveyor must add the inspection:- "(e) prior to covering a waterproofing membrane in any wet areas"

The Building Regulations remain consistent in the other areas affecting waterproofing, namely;

Part 2 – Building Code of Australia  
The regulations referring to the adoption of the NCC and relevant Australian Standard

Part 9 – Building Work, Division 1 – Methods of assessment of compliance; Covering material testing, compliance certificates etc. as proof of quality of building works.

The VBA have confirmed that only a registered Building Practitioner (appropriate categories) can authorise compliance of waterproofing works. A sub-contractor who is not a Registered Building Practitioner cannot authorise compliance. A statement from the sub-contractor may state in their opinion that they have complied with the relevant Standard and thus compliant with NCC, however the liability is primarily with the Registered Builder (now shared with the Building Inspector or Surveyor for wet areas).

**David Hepworth**  
AIW Director

## QBCC TRADIE TOURS

Waterproofing is consistently one of the most common defects reported to the QBCC and mistakes can be costly.

During June 2017, the QBCC presented ten waterproofing seminars throughout Queensland metro and regional centres, on behalf of the Australian institute of Waterproofing.

The seminars were dedicated to waterproofing and tiling issues with a focus on 'Preventing Waterproofing Defects'.

Approximately 1000 builders, waterproofers, certifiers, and tilers attended and came ready to ask many questions relating to waterproofing best practice.

Bayset's Training & Quality Manager, Frank Moebus provided in-depth information about avoiding installation problems.

The Tradie Tour saw a great turn out with lots of good feedback from the industry.

## PROJECT REFERENCE

### Botanicca Corporate Park

*"A challenging but very rewarding job" - Gary Moody*

#### Overview

**Property Type:** Commercial

**Project Type:** Restoration

**Scope:** Leaking roof joints affecting company suites

**Applicator:** Australian Waterproofing Company Pty Ltd

**Area m<sup>2</sup>:** 1150m<sup>2</sup>

**Category:** Waterproofing

#### Products Used

- Soprema Soprasun 3.0S
- Soprema Sopradhere Primer
- Soprema Alsan Flashing
- Soprema Roof Vents

#### Project Details

Botanicca Corporate Park had leaks in the roof joints that affected the various company suites below and at balcony level. Fixing the leaking roofs was paramount to the success of the building as it was only built in 2006, it now has a 20 year warranty. A watertite roof with The Soprema Torch On was applied to achieve a very pleasing aesthetic result as well as a high quality waterproofing result due to great application from our experienced applicator.
